## Description

The 5-megapixel AF7515MZTL digital microscope provides a long working distance solution for capturing high-resolution images. Equipped with AMR and FLC, AF7515MZTL is a powerful tool for facilitating measurements and obtaining high-quality images. This model is compatible with the WF-20 Wi-Fi streamer.

The AF7515MZTL is part of the Long Working Distance (LWD) range and with its Long Working Distance and magnification range from 10 - 140x, it is suitable for a wide range of applications where extra distance to the object or a larger field of view is required.

The extra working distance and larger field of view make this model an ideal solution for tasks such as repair, rework or assembly or for working with bulky or fragile objects that cannot be touched. Because of the built-in polarization filter this model is ideal when working with shiny or reflective objects such as metal, plastic, glass, jewelry, electronics, etc. The AMR function is of particular importance when the measurement functions are frequently used.
